

Nutrient rich wastewater, handled — at a lower, fixed cost.

Nutrient recovery delivered as a service — so it stops being your team's problem.

Digestate handling is one of your biggest operating burdens

20%+

of operating cost can go to handling nutrient-rich digestate

10–30 €/m³

disposal cost — and rising as volumes grow

~97%

of digestate is spread on fields, where space & timing are limited

170 kg N/ha

EU annual field-application cap restricts where it can go

There's a smarter way to deal with it

Most of your cost and your limits come from the nutrients in the digestate. We take them out — at the plant, as a service.

TODAY

- Haul and spread the untreated digestate
- Costs scale with volume and distance
- Nutrient limits decide where it can go
- Your team owns the problem

WITH NPHARVEST

- ✓ Remove the nutrients at the source
- ✓ Up to 90% of N and P recovered plug-and-play
- ✓ A smaller, easier, cheaper stream to manage
- ✓ Tolerance for up to 9 % suspended solids

Nutrient removal, delivered as a service

Up to 90% removed

of nitrogen and phosphorus, tailored to your target

One predictable & lower price

a fixed price per m³ treated — no capex, nothing to buy

Zero added work

we install, operate, maintain and take the nutrients away

Scales with you

modular capacity that flexes as your plant grows

Proven where it counts

NPHarvest Nutrient Catcher unit operating on-site.

From the lab to the field

Technology developed at Aalto University, Finland, since 2016 — now operating at industrial scale.

Successful industrial demo

20 m³ / day DEMO unit operating at a clients around Europe. Validated up to 90% recovery in real conditions.

Capable delivery team

Our team combines decades of experience in biogas project delivery with cutting edge technology.

Curious whether it fits your plant?
